## **We're improving your power supply**

Hello.

We're Electricity North West and we operate your local electricity network.

As part of our ongoing network upgrades, we're investing £1.2m to replace and install 2.2km of underground electricity cables from the Knott Mill electricity substation on Rice Street to Water Street, extending to substations in Salford.

Most of the North West's power network was installed back in the 1950s so it's essential we carry out the upgrade to ensure you receive the power you need for years to come.

We know that times are difficult at the moment, and that's why it's so important that we complete this proactive preventative work to reduce the risk of unplanned power cuts in future which could be even more disruptive.

As a utility provider, our teams are designated key workers to allow us to keep maintaining the network and power supply. We will of course be following the latest government guidance as we carry out this essential work.

### **How this will affect you:**

- This work will take approximately 12-18 months starting on Monday 10 August 2020.
- Engineers will carry out work on Hampson Street, Trinity Way, Water Street, Duke Street, Liverpool Road and Rice Street in phases.
- Roads will remain open as much as possible and in some instances, temporary traffic lights will be used on Rice Street, Dale Street, Liverpool Road and Water Street so engineers can work safely.
- Where possible, we will look to maintain access to residential properties and car parks.
- The work will not affect your electricity supply, but if we do need to remove power for any reason we will let you know in advance.
- The work will be undertaken in stages with multiple excavations, particularly on Rice Street to allow this complicated engineering project to be completed

We would like to take this opportunity to thank you for your patience and support to allow us to carry out this work safely.
